

Analysis of MCP-PMT pulses from Argonne laser test stand

Baptiste Joly
LPC Clermont Ferrand

method :

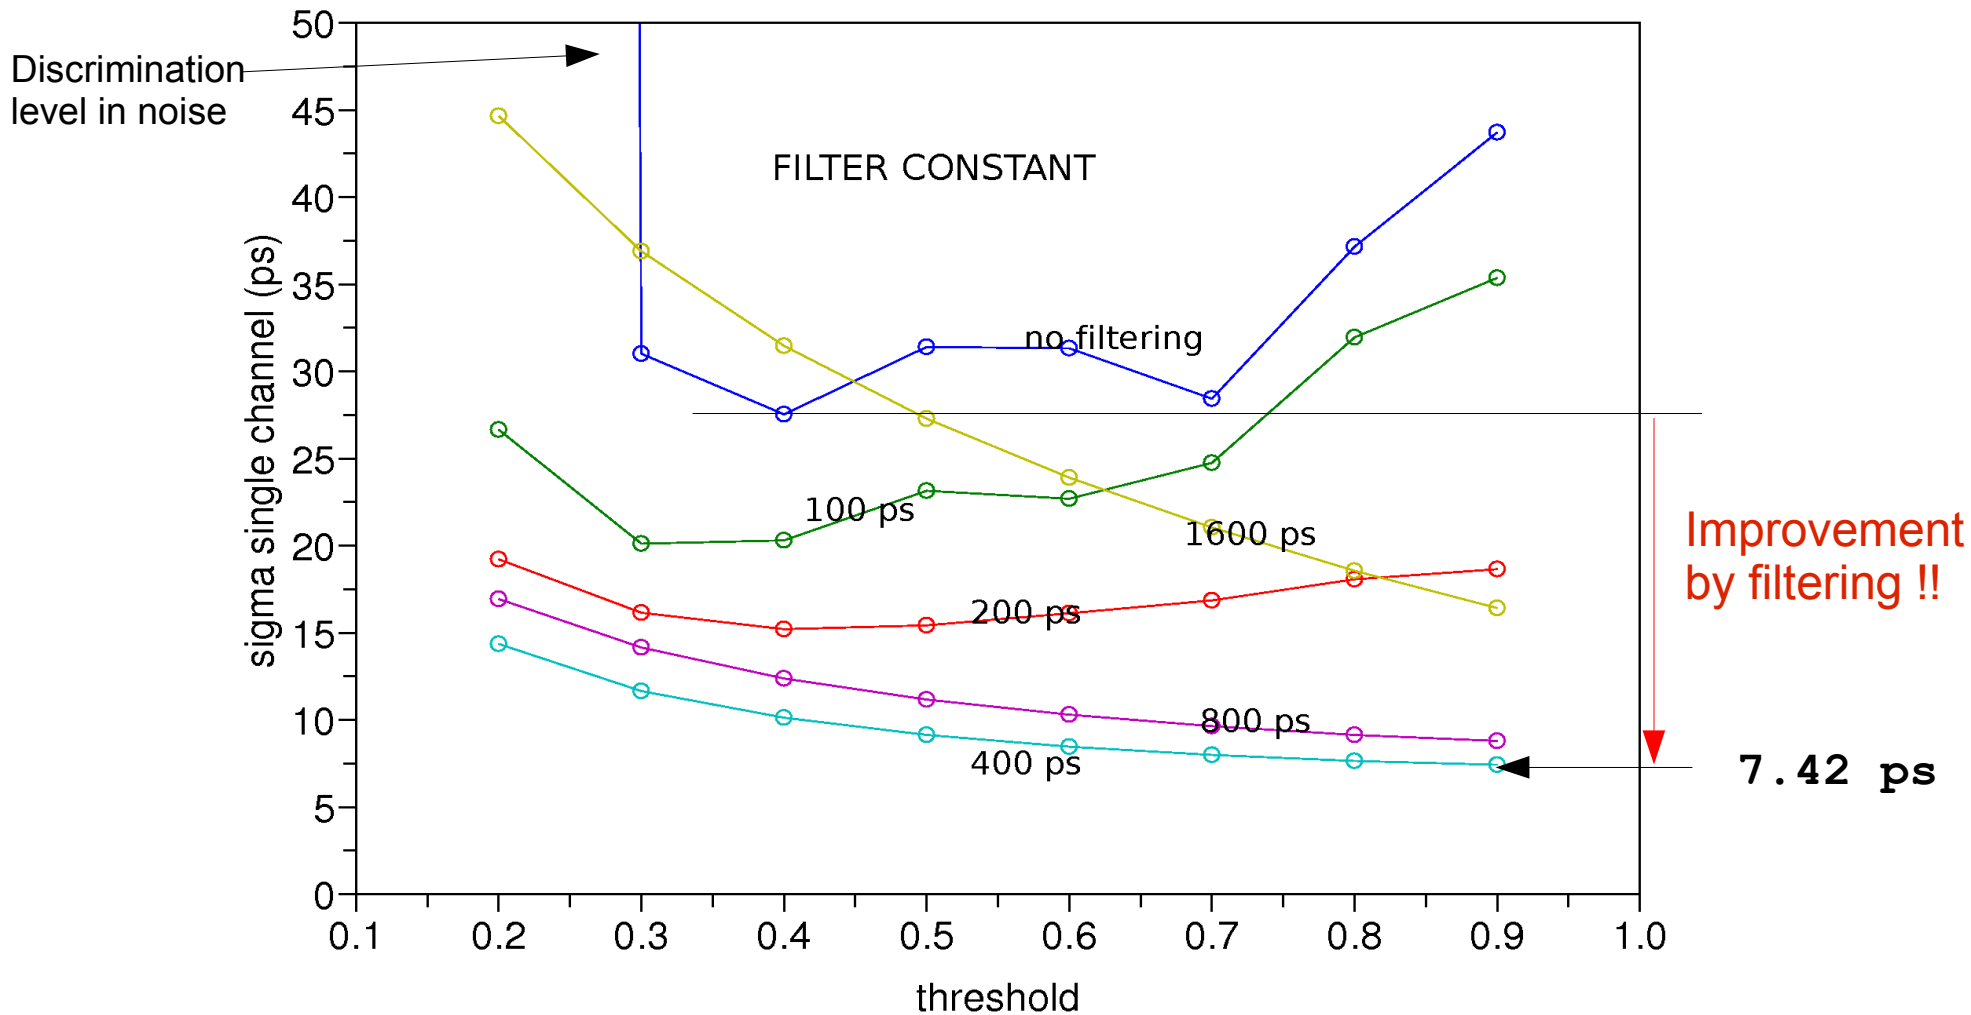

- low-pass filtering by cubic splines with different time constants
- constant fraction discriminator applied to the filtered signal

signal (digits)

Time (unit =sampling step = 50 ps)

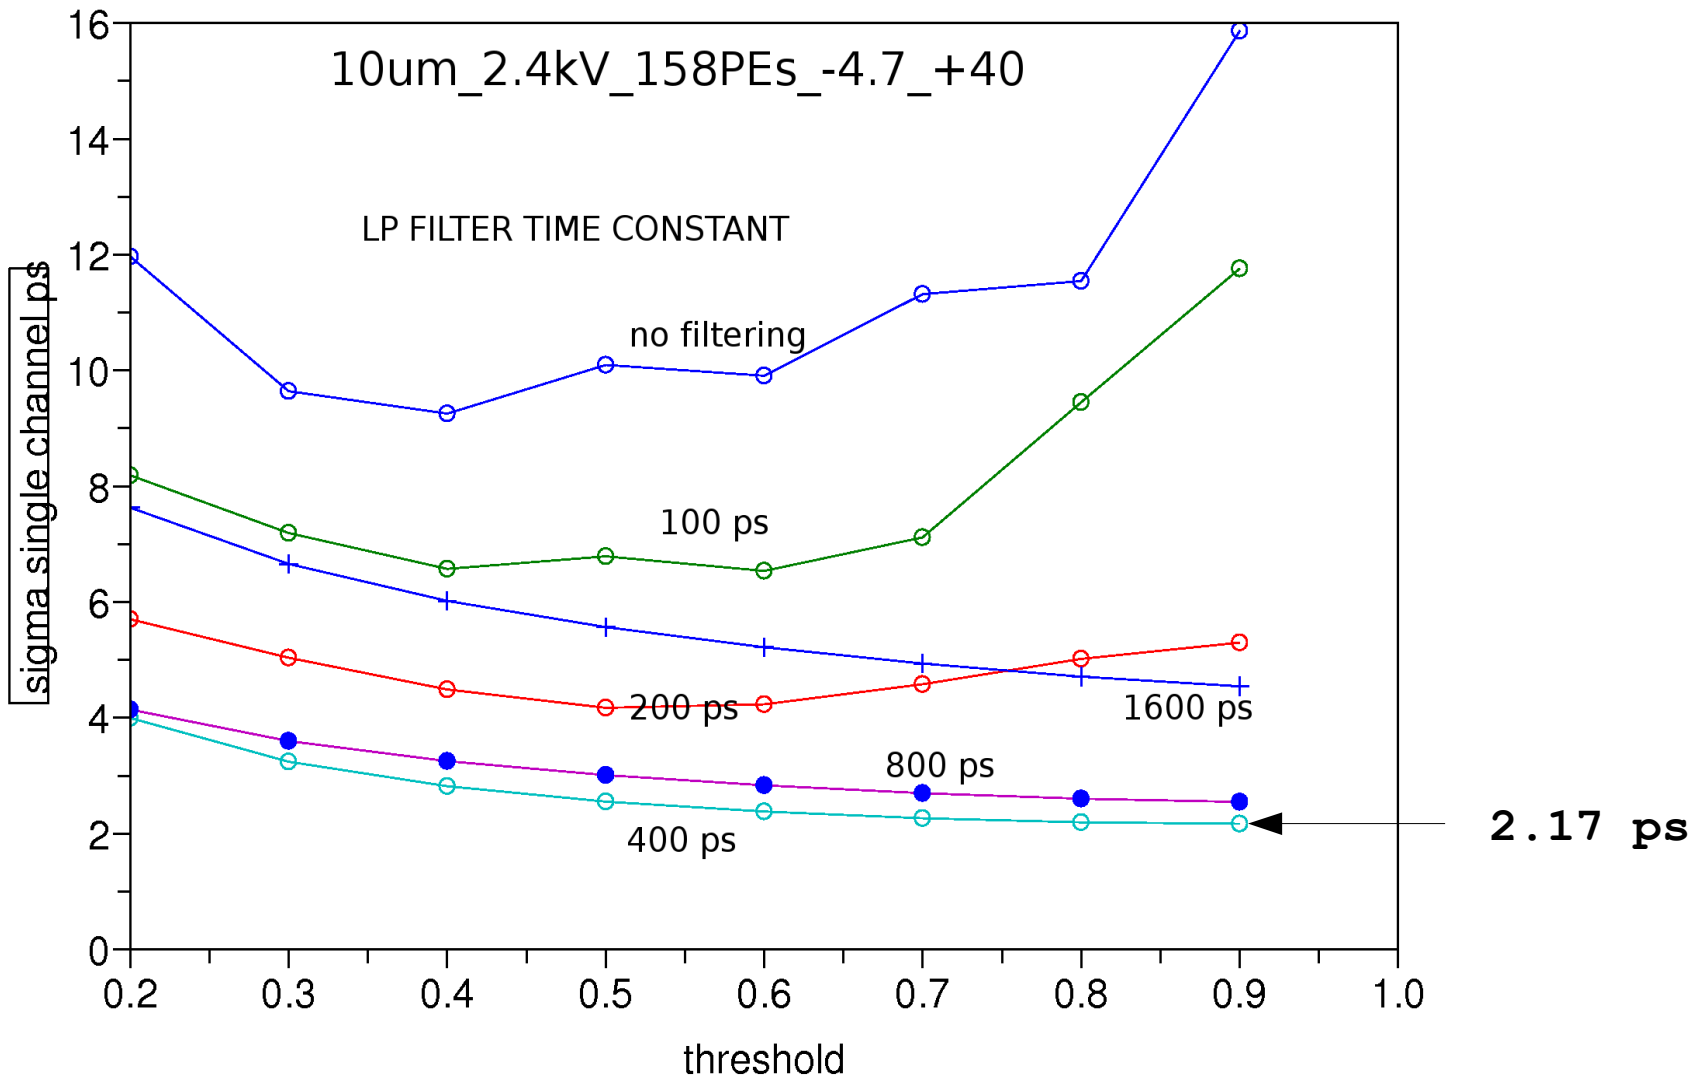

10um_2.3kV_158PEs_-4.7_+40

CH1
sigma noise = 8.50
amplitude ~ 62

CH2
sigma noise = 11.0
amplitude ~ 62

Unit : ADC counts

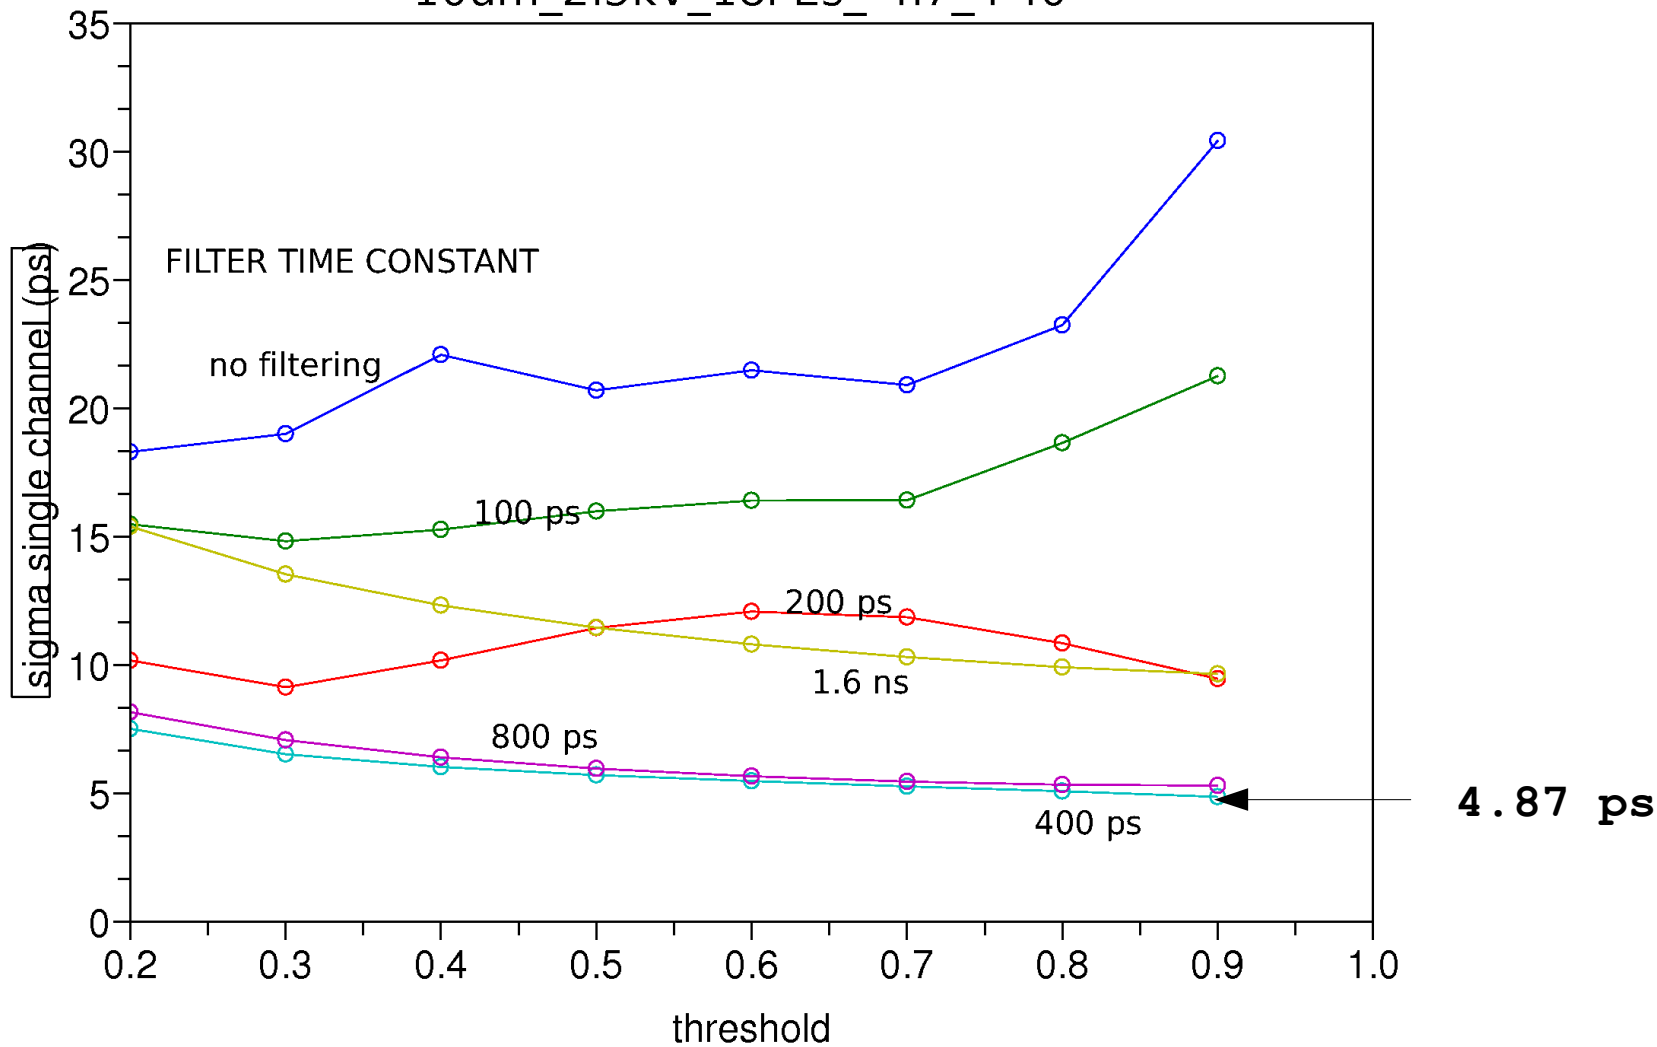

CH1
 sigma noise = 1.6
 amplitude ~ 95

CH2
 sigma noise = 1.7
 amplitude ~ 96

Unit : ADC counts

10um_2.5kV_18PEs_-4.7_+40

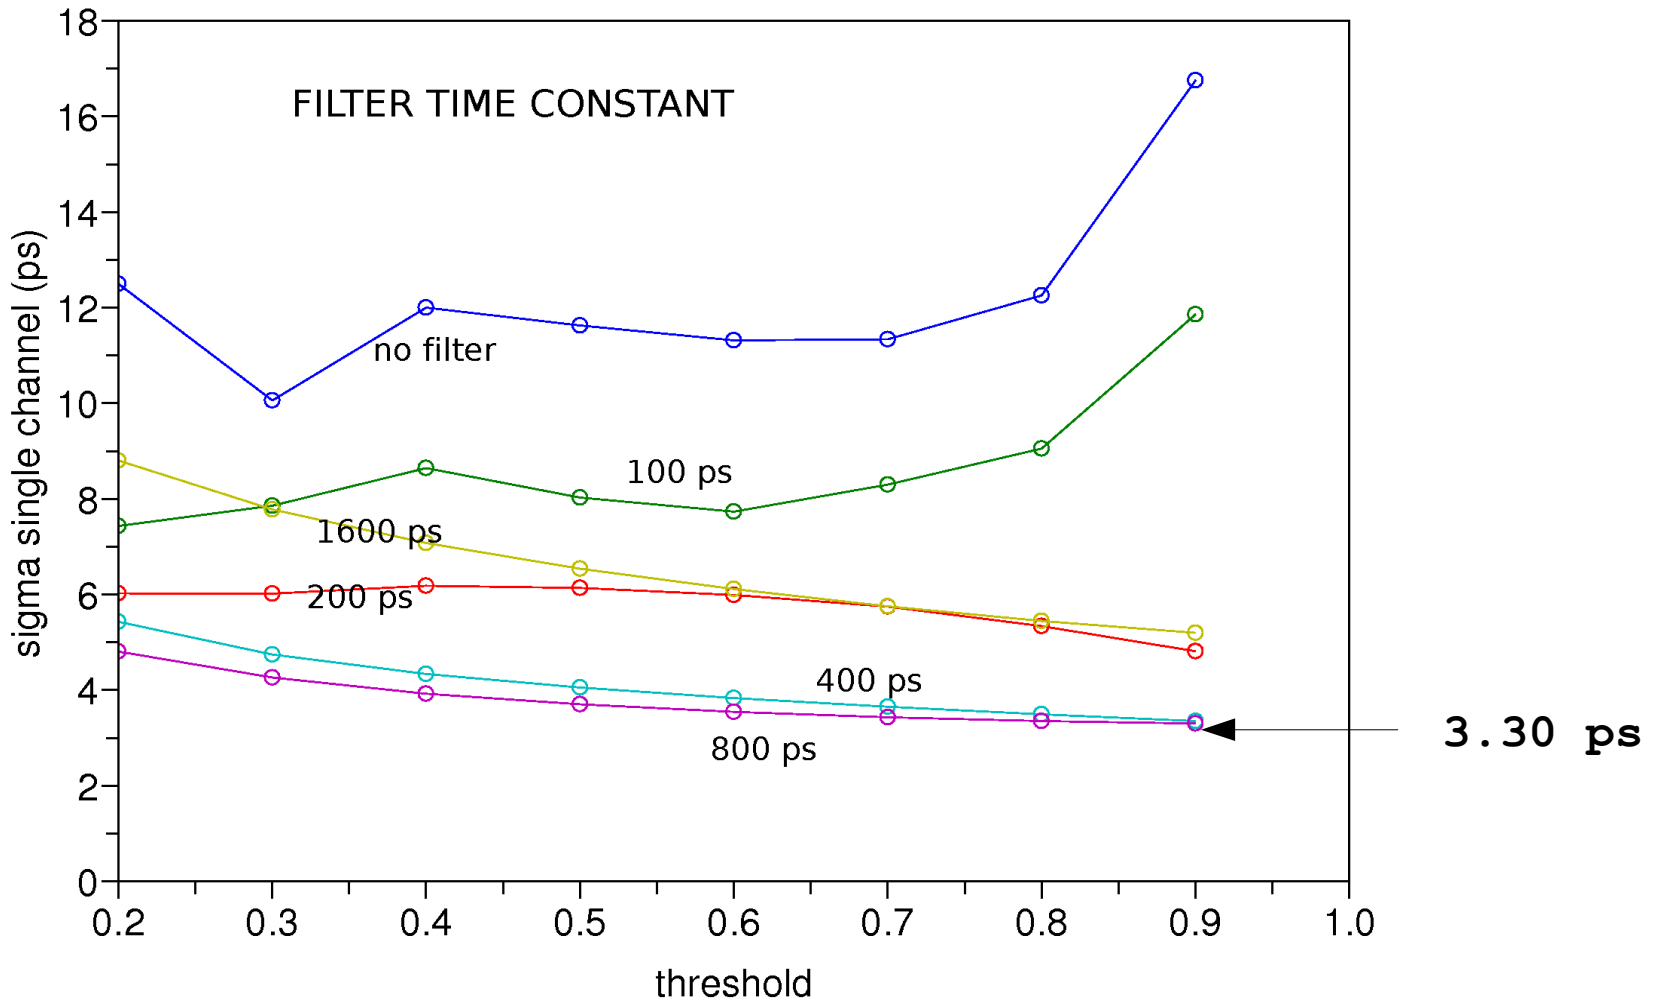

CH1
sigma noise = 3.3
amplitude ~ 99

CH2
sigma noise = 3.4
amplitude ~ 100

Unit : ADC counts

10um_2.5kV_50PEs_-4.7_+40

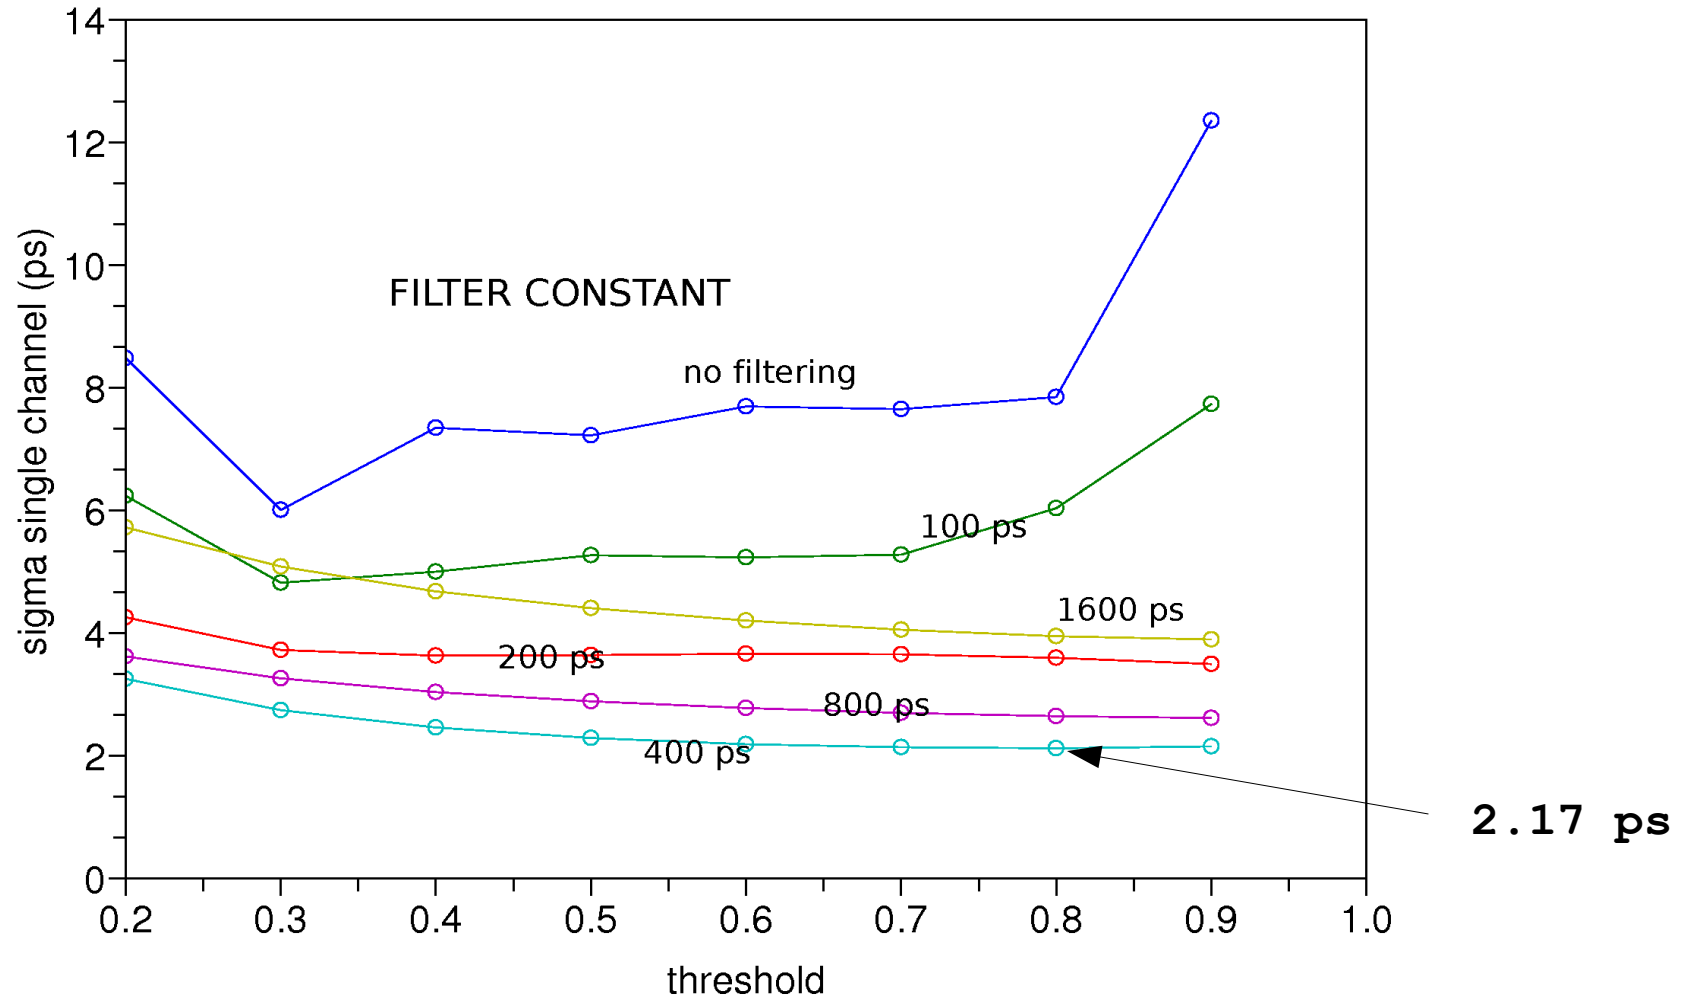

CH1
sigma noise = 1.6
amplitude ~ 86

CH2
sigma noise = 1.7
amplitude ~ 87

Unit : ADC counts

10um_2.5kV_158PEs_-4.7_+40

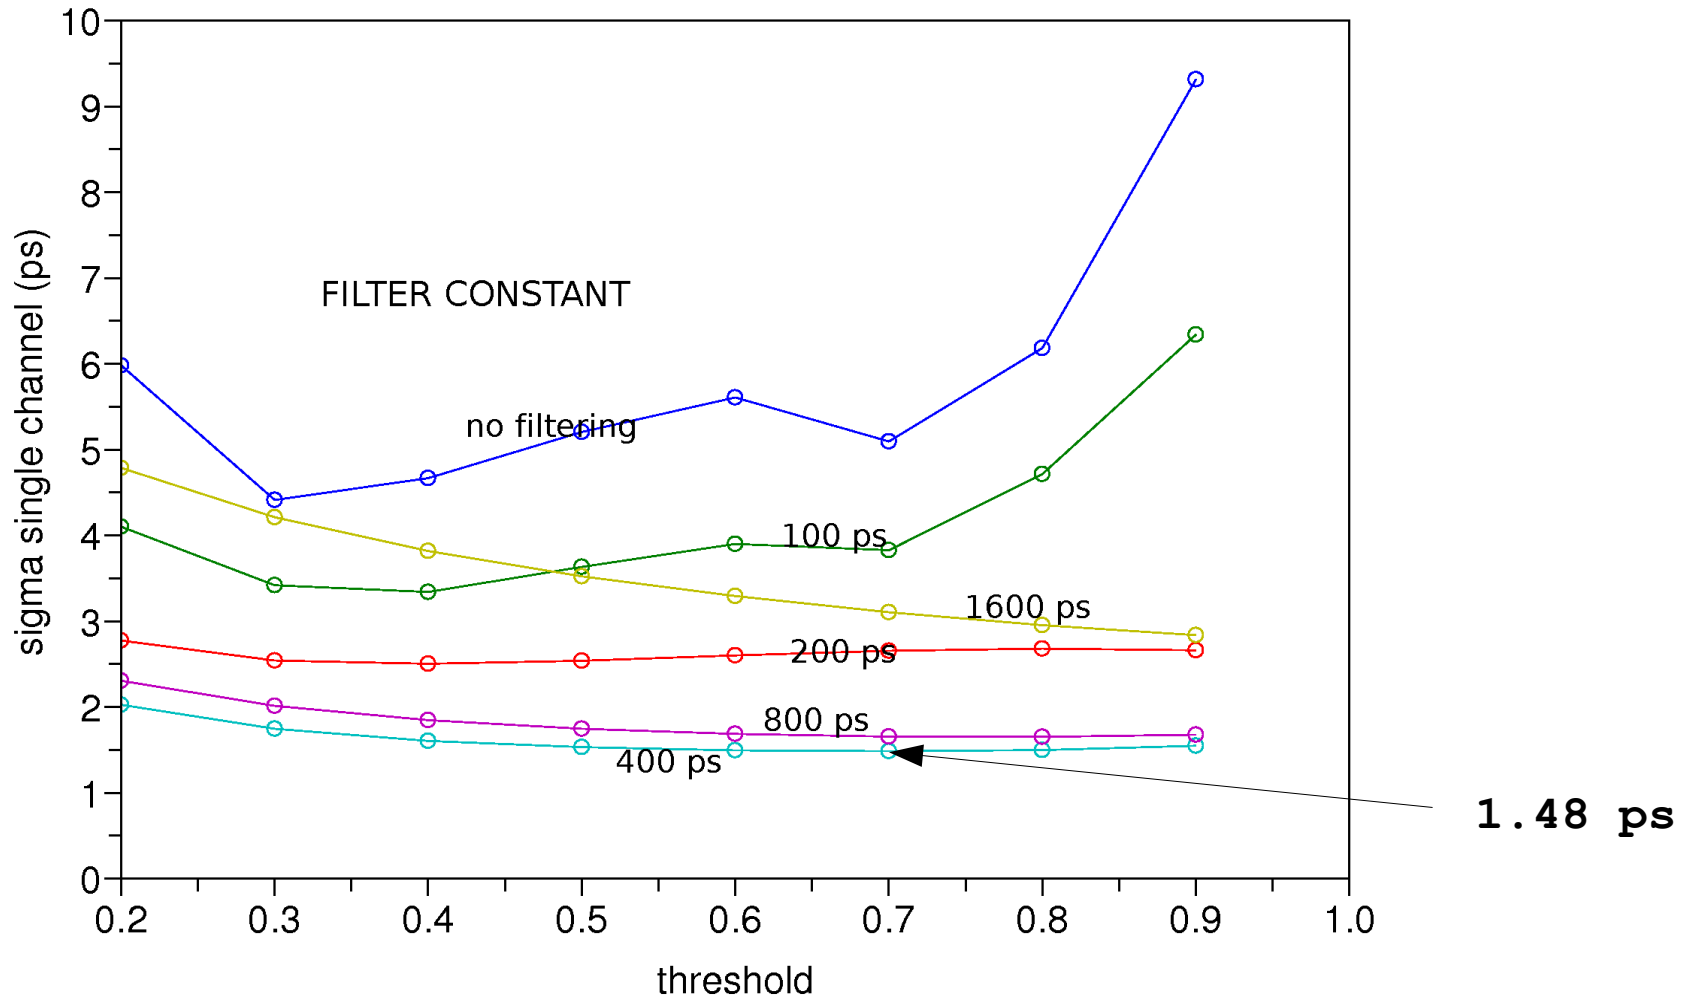

CH1
sigma noise = 1.4
amplitude ~ 86

CH2
sigma noise = 1.3
amplitude ~ 83

Unit : ADC counts

10um_2.6kV_158PEs_-4.7_+40

CH1
sigma noise = 1.4
amplitude ~ 143

CH2
sigma noise = 1.3
amplitude ~ 138

Unit : ADC counts
